Professional Summary

Computer Science undergraduate focused on real-time systems and applied AI, with hands-on experience building latency-sensitive audio and communication applications. Developed multiple production-style projects involving WebRTC, on-device ML, and event-driven architectures, with measured latency optimizations (<50ms processing in audio pipelines).

Technical Skills

Languages: Kotlin, Python, C++, Java, Flutter, Dart

Frameworks: Jetpack Compose, Android SDK, TensorFlow Lite, ONNX Runtime, Node.js, Express.js

Systems: Real-Time Systems, Event-Driven Architecture, MVVM, REST APIs, WebRTC, JNI

Databases: Firebase Firestore, PostgreSQL, SQLite

Tools: Git, GitHub, Android Studio, Gradle, Firebase, Cloudinary

AI/ML: CNNs (YAMNet), Voice Activity Detection, Speaker Recognition, Audio Processing

Projects

Pausify – Real-Time Audio Control System [GitHub] Dec 2025 – Feb 2026
Kotlin, C++, ONNX Runtime, TensorFlow Lite

- Reduced audio processing latency to <50ms on 16kHz streams by implementing a JNI-based C++ pipeline (baseline: ˜120ms in pure Kotlin).
- Improved voice detection reliability in noisy environments by integrating VAD, YAMNet, and speaker recognition, reducing false triggers during testing scenarios.
- Designed a deterministic state machine to handle real-time audio events, ensuring consistent behavior under varying input conditions.

SoSafe – Real-Time Emergency Response System [GitHub] Mar 2026 – Present
Kotlin, WebRTC, Firebase, Cloudinary

- Built a real-time SOS system enabling live audio streaming and location tracking using WebRTC and Firebase.
- Designed a hybrid streaming architecture (peer-to-peer + cloud fallback) to maintain connectivity under unstable network conditions.
- Achieved sub-second event synchronization across devices during real-time testing sessions.

AutoCommitBot – AI-Assisted Git Automation CLI [GitHub] Feb 2026 – Mar 2026
Python, Typer, GitPython, Gemini API

- Developed a CLI tool to generate context-aware commit messages from code diffs using LLM APIs.
- Implemented fallback mechanisms to ensure consistent output during API failures.
- Automated commit workflows using Windows Task Scheduler, enabling zero-touch background logging.

Experience

Full Stack Intern – Multiplyy (Samay Fintech Pvt. Ltd.) August 2026 – Present

Full Stack Intern – Payperprint Private Limited May 2026 – July 2026

- Develop and maintain full-stack web applications using NestJS and PostgreSQL, focusing on scalable backend architecture and reliable data management.
- Build responsive, high-performance web applications using Next.js, with efficient state management through Redux and modern UI styling using Tailwind CSS.

AI/ML Intern – CTTC Bhubaneswar May 2025 – June 2025

- Built and evaluated machine learning models on structured datasets, including preprocessing and feature engineering.

Education

B.Tech in Computer Science & Engineering 2024 – 2028
Veer Surendra Sai University of Technology, Odisha
CGPA: 8.91 / 10.0 (4th Semester)
